vijith.vt.ai@gmail.com
Thiruvananthapuram, INDIA

Generative AI and Intelligent Automation Engineer with a Master’s in Artificial Intelligence, specializing in designing and delivering production-ready LLM-powered systems. Experienced in building agentic AI architectures using retrieval-augmented generation (RAG), context-aware memory, and tool-orchestrated workflows with Python frameworks such as LangChain. Strong background in backend automation, API integrations, and scalable system design, enabling seamless integration of GenAI solutions into enterprise workflows. Focused on production readiness, performance optimization, cost efficiency, observability, and responsible AI practices. Proven technical mentor, having delivered 50+ sessions and guided 200+ engineers in AI and automation initiatives.

- generative ai
- Agentic Ai
- Large Language Model
- Retrieval Augmented Generation
- Langchain
- Langgraph
- Python
- Intelligent Automation
- Backend Development
- Vector Database
- Prompt Engineering
- Multiagent Systems
- Workflow Automation
- System Integration
- Mentoring
- API

CERTIFICATION

- Google IT Automation with Python Specialization
- Google Data Analytics Specialization
- Foundations of Project Management
- Human Resources Foundations
- Microsoft Excel Beginner to Professional

WORK EXPERIENCE

Associate Specialist-ThinkPalm Technologies Pvt. Ltd. Oct 2022 - Present

- Design and implement LLM-powered solutions and automation frameworks for scalable applications.
- Develop maintainable, Python-based backend services integrating AI capabilities with enterprise platforms.
- Architect a cross-VM automation framework with Robot Framework and Selenium, increasing automation coverage by 30%.
- Collaborate with cross-functional teams to enable intelligent workflows and ensure production readiness, focusing on performance and security.
- Mentor and train over 200 engineers on modern AI-assisted development workflows and automation frameworks.

Guest Faculty Computer Science-Kerala State Centre for Advanced Printing & Training Sep 2018 - Oct 2022

- Guided students in key computing concepts and emerging technologies, enhancing their practical skills in AI and programming.
- Developed and delivered interactive workshops, connecting theory to real-world applications in AI and automation.
- Focused on building student confidence through hands-on projects, fostering problem-solving skills and innovation.

PROJECTS

TalentHunt — AI-Powered Intelligent Recruitment Platform 12 Months

Designed and developed an AI-powered Applicant Tracking System (ATS) that transforms traditional keyword-based recruitment into contextual, LLM-driven evaluation. Architected a modular FastAPI backend with MySQL, JWT authentication, and role-based access control. Built a Resume—JD Matching Engine using LLM + RAG pipelines with embeddings and vector retrieval, implementing multi-factor Fit Score logic with AI-generated explanations. Developed recruiter-controlled evaluation workflows and automated full application lifecycle email communication. Reduced manual resume screening effort by ~60—70% through intelligent contextual matching.
Tech Stack: Python • FastAPI • MySQL • JWT • LangChain • LLMs • RAG • Embeddings • Vector DB • React • REST APIs

BrailleScan AI — Accessibility-Focused Braille Recognition Platform 5 Months

Designed and developed a production-grade Braille recognition and conversion platform supporting Malayalam (Bharati Braille) and English (Grade 1). Architected a decoupled React + FastAPI system enabling multi-page Braille image processing, bi-directional conversion (Braille ↔ Text), and export to PDF, image, and audio formats. Implemented OpenCV-based dot detection, deterministic cell segmentation (2×3 grid), rule-based decoding, and confidence scoring for explainable results. Integrated REST APIs for processing, PDF generation, and text-to-speech. Built WCAG-compliant, accessibility-first UI with session history tracking. Designed architecture to seamlessly upgrade from deterministic CV pipeline to ML/CNN-based recognition without breaking APIs.
Tech Stack: FastAPI • Python • OpenCV • React • TypeScript • REST APIs • PDF Generation • TTS Integration

LegalPro — Advocate Case & Client Management System	5 Months
Designed and developed a production-ready case and client management system for independent advocates to streamline legal operations. Built using Django and PostgreSQL with structured data models for clients, cases, proceedings, fee tracking, and document storage. Implemented unique case identification logic (Court + Number + Year), automated next posting date updates, and dynamic balance calculation for payments. Integrated Celery + Redis for email reminders and scheduled tasks. Configured secure document access, soft-delete mechanisms, history tracking, and CSRF protection. Deployed using Unicorn and Nginx with production-grade configuration and automated database backups. Tech Stack: Django • PostgreSQL • Celery • Redis • Bootstrap 5 • Unicorn • Nginx	
DigiLib — Modern Digital Library Management System	4 Months
Designed and developed a modern web-based Digital Library Management System enabling users to browse, search, and manage digital book collections through a clean, responsive UI. Built using React, TypeScript, and Vite with Tailwind CSS and shadcn-ui for an accessible and scalable component architecture. Implemented structured state management, modular folder organization, and reusable UI components to ensure maintainability and performance. Focused on intuitive UX, fast rendering, and organized content presentation for seamless digital resource access. Tech Stack: React • TypeScript • Vite • Tailwind CSS • shadcn-ui	
Vijith’s Violin Academy — Full-Stack Learning Management System	6 Months
Designed and developed a full-stack Student Management System for Vijith’s Violin Academy, supporting Students, Admins, and Institutions. Built a modern React + TypeScript frontend with role-protected dashboards, progress tracking, attendance, fee management, curriculum control, and trial booking workflows. Implemented Supabase backend with PostgreSQL, Row Level Security (RLS), authentication, storage, and Edge Functions for email automation and student lifecycle management. Integrated AI-powered RAG chatbot for contextual assistance. Architected secure RBAC policies, modular service layers, and scalable database schema. Deployed web and Android builds via Capacitor, enabling structured academic workflow digitization. Tech Stack: React • TypeScript • Supabase • PostgreSQL • RLS • Edge Functions • Tailwind • TanStack Query • Capacitor	

EDUCATION	
MS/M.Sc(Science) Computer Science with Specialization in Artificial Intelligene	2022
Dept. of Computer Science, Kerala University	
B.Sc - Bachelor of Science Computer Science	2015
College of Applied Science (IHRD), Dhanuvachapuram	

EXTRA-CURRICULAR ACTIVITIES	
Technical Mentorship & AI Training	
Delivered 50+ technical sessions on Generative AI, Python, Automation & MLOps	
Founder - Vijiths Violin Academy	
Built and scaled an international music education platform with structured curriculum and digital student management system	
Profile	

ADDITIONAL INFORMATION	
Hobbies: Technical Mentorship & Teaching, Carnatic Violinist, Reading On AI & Automation Trend	
Languages: Malayalam, English
